BANKING PROCESS CLASSIFICATION FRAMEWORK

THE BANKING PROCESS CLASSIFICATION FRAMEWORK
Based on the renowned Process Classification Framework (PCF), a taxonomy of cross-functional business processes intended to allow objective comparison of performance within and among organizations, and supported by IBM, this industry PCF enables more industry-applicable content by outlining and defining processes and activities specific to the banking industry. This allows organizations to choose the framework most relevant to the specific process improvement need, whether it be benchmarking within or across industries, business process management/re-engineering, or content management. The cross-industry PCF and industry PCFs are available on the APQC Web site at no charge. IBM provided the subject matter expertise and intellectual property to create the industry-specific business process classification frameworks as part of IBM's continuing leadership in the promotion of open standards to help organizations evaluate and measure business processes at an industry level.

THE FRAMEWORK FOR PROCESS IMPROVEMENT
Experience shows that the potential of benchmarking to drive dramatic improvement lies squarely in making out-of-the-box comparisons and searching for insights not typically found within intra-industry paradigms. To enable this beneficial benchmarking, the APQC Process Classification Framework serves as a high-level, industry-neutral enterprise process model that allows organizations to see their business processes from a cross-industry viewpoint.

The cross-industry framework has experienced more than 15 years of creative use by thousands of organizations worldwide. The PCF provides the foundation for APQC’s Open Standards Benchmarking database of performance metrics, the largest of its kind in the world. The PCF will continue to be enhanced as the database further develops definitions, processes, and measures. The PCF, associated measures, and definitions are available for download at no charge at www.apqc.org/osb. An online benchmarking portal for individual assessments is also available.

HISTORY
The cross-industry Process Classification Framework was originally envisioned as a taxonomy of business processes and a common language through which APQC member organizations could benchmark their processes. The initial design involved APQC and more than 80 organizations with strong interest in advancing the use of benchmarking in the United States and worldwide. Since its inception in 1992, the PCF has seen updates to most of its content. These updates keep the framework current with the ways that organizations do business around the world. In 2008, APQC and IBM worked together to enhance the cross-industry Process Classification Framework and to develop a number of industry-specific PCFs.
LOOKING FORWARD
The cross-industry and industry Process Classification Frameworks are evolving models, which APQC will continue to enhance and improve regularly. Thus, APQC encourages comments, suggestions, and more importantly, the sharing of insights from having applied the PCF within your organization. Share your suggestions and experiences with the PCF by e-mailing pcf_feedback@apqc.org.

UNDERSTANDING THE NUMBERING SCHEME
Beginning with Version 5.0.0, the PCF uses a numbering scheme that differs from previous versions. The cross-industry framework and the industry-specific frameworks collectively form a library of process...
elements used in APQC’s Open Standards Benchmarking database. Each process element is referred to by two numbers: a number used to locate the content within that particular framework (in the format 1.2.3.4) and a serial number used to uniquely identify the process element across all of the various Open Standards Benchmarking frameworks (beginning with 10000).

For example, the process element “1.2 Develop business strategy (10015)” is uniquely identified by the serial number “10015” and the hierarchical reference number “1.2.” In industry-specific PCFs, any process element identified as “10015” will have the same scope and definition as a process element of the same number elsewhere, but may be labeled differently.

**INTERPRETING THE PCF**

**Category:** The highest level within the PCF is indicated by whole numbers (e.g., 8.0 and 9.0).

**Process Group:** Items with one-decimal numbering (e.g., 8.1 and 9.1) are considered a process group.

**Process:** Items with two-decimal numbering (e.g., 8.1.1 and 9.1.2) are considered processes.

**Activity:** Items with three-decimal numbering (e.g., 8.3.1.1 and 9.1.1.1) are considered activities within a process.

The Banking PCF is based on the cross-industry PCF Version 5.0.0 released in April 2008.
